

This tutorial is to help you learn how to make certain spots color after you have converted a color photo to black and white. Ok after you have the picture that you want to work on open in Photoshop:

1. Convert the photo to black and white using a Channel Mixer Adjustment Layer, If you need help with this step please refer to our [Conversion to Black and White Tutorial](#).

2. Make sure you have Channel Mixer Adjustment Layer selected in the Layers menu.

3. Click on the Brush Tool,

4. (make sure the colors you are working with are black and white).

5. Using the color black, carefully brush over the parts of the picture that you want to be in color, (you made need to adjust brush sizes for the small details). When you do this the parts that you brush should turn back to color.

--if you ever mess up, change the foreground color to white and the background color to black and brush over what you want to be B&W again.
